Design software such as AutoCAD is intended to make the design process easier and more effective. The time spent by a designer developing and maintaining a design concept is reduced by using a CAD application. Features like aligning, plottting, annotating and archiving may also save the user some time. In addition, using a CAD application the user can generate construction drawings and bills of material in a manner that conforms with local, regional and national building codes and other applicable laws. The design software industry is highly competitive. The software companies strive to produce the best possible CAD software, in both quality and functionality, which will meet or exceed the needs of the user. In this situation, it is important for AutoCAD to be reliable and have good performance. AutoCAD is a complex computer program, running on a variety of computer operating systems, so it is not uncommon for AutoCAD to encounter errors. For this reason, it is essential to configure AutoCAD properly to avoid errors that may lead to system instability, interruptions in the operation of the program and possible loss of valuable data. The purpose of this guide is to show you how to configure AutoCAD properly. It explains the basic settings of AutoCAD that must be set to work efficiently and to avoid errors and/or crashes. It shows you how to make AutoCAD startup faster and more reliable. It also shows how to avoid problems and complications that may arise when trying to install AutoCAD on a system with a different operating system or incompatible operating system drivers. When this manual is first run, it will download the latest version of AutoCAD and install it. It will also show you how to start AutoCAD and access the Help file. The first time you run AutoCAD, you must make the following three essential configuration settings: Step 1: How to configure AutoCAD to start automatically when Windows starts (Autorun option) Autorun is a feature in the registry that allows AutoCAD to run when the computer starts. The Autorun feature can be configured so that it will always run on startup or it can be configured to run only when you start AutoCAD. For Windows Vista and Windows 7, follow these steps: Click the Start button. Type regedit in the Search Box and press Enter. The Registry Editor will appear. . The Registry Editor will appear. Autodesk Exchange Design Review is an online service provided by Autodesk that allows designers to create 3D models and 360-degree content through their web browser. 3D models can be shared through WebGL, 3D viewing, as well as collaborative online web meetings and online video conferencing. This feature was released in Autodesk 2014 and is integrated with the standard web browser. Autodesk is currently replacing this with Project Spark. In 2013 Autodesk released a new service called Business Viewer, which is designed to create a virtual model of the building or other object the viewer sees on a real world camera. It is available in desktop apps, mobile apps and online services. Raster graphics AutoCAD, AutoCAD LT and AutoCAD Civil 3D can render most types of raster images. These include scanned images (such as from fax machines), TIFF images, PNG images, JPEG images and GIF images. The ca3bfb1094

[Significance of reflexivity in nursing science]. In this paper, the process of reflexivity in nursing is understood as a series of questions to the nurse regarding her professional practice. From this perspective, the main objective is to have an active participation in the research and to share all the information obtained with the other researchers. The empirical material refers to data obtained from a qualitative research with 29 nurses from a university hospital in Belo Horizonte, Minas Gerais State, Brazil. Semi-structured interviews were employed as research tools. The analysis of data produced three categories: "Re-viewing nursing practice and studies", "Constructing a work ethic based on the experience of uncertainty" and "Substituting the experience for the knowledge".The role of timing of cesarean section for fetal distress in primiparous women. To evaluate the effects of timing of cesarean section (CS) for fetal distress on maternal and neonatal outcomes. Retrospective cohort study. The study population consisted of 1,136 parturients with fetal distress at 37-41 weeks' gestation who had primary CS. The data were obtained from the records of the Perinatal Institute, Chinese Academy of Medical Sciences, Beijing, China, during January 1998 to December 2002. The timing of CS was subdivided into: 0-5 min, 6-15 min, and > or =16 min. The incidence of postoperative fever and infection was higher in the
