AutoCAD Crack+ For PC

Some of the more commonly used features are described below. AutoCAD has a command-line API, named the CAD Commandline Interface (CLI), which is used to automate tasks. The CLI includes commands to read, write and display AutoCAD drawings. It also has a command to change the AutoCAD settings. The command line makes the use of AutoCAD easy, as it allows the user to run AutoCAD from the command line, from a file, or by specifying parameters. In addition to the command line, there is a command interpreter, known as Command Interpreter for AutoCAD (CIAC), which is based on the AutoLISP language. AutoLISP is a programming language based on a tree structure. AutoLISP is a script based language, which is often used to automate tasks in AutoCAD. AutoLISP has a number of built-in functions that are used to work with AutoCAD and its objects. To run AutoLISP code, the AutoLISP executable must be added to the AutoCAD setup file. AutoLISP code, once compiled and launched, runs in a sandbox environment and is not accessible to other applications. .NET is a Microsoft technology used to integrate Windows application with AutoCAD in 2000, 2007 and 2013. Visual LISP is a visual scripting language used to

create AutoCAD extensions. It is based on a tree structure and is similar to AutoLISP. It was also the base for the former extension language, Visual AutoLISP, which was replaced by Visual LISP.

Visual LISP is compatible with AutoCAD and can be used on any AutoCAD version. Visual LISP is available in multiple languages. References
