This is an easy question, I know it but I'm not sure how to approach it. The question is: Prove that if S is open in \mathbb{R}^n and S is an open subset of U then $\overline{A} \subseteq U$. I want to prove that $\overline{A} \subseteq U$ by contradiction. I thought of, say, the open set $A = [0,1) \cup (2,3)$ but S is not open and so I can't use the definition of \overline{A} as the largest open subset of S , because S is not open. Can anyone help? A: 1) Consider the complement $S^c = \mathbb{R}^n \setminus S$. 2) Observe that S is an open subset of U , since it is the union of open sets. Therefore $\mathbb{R}^n \setminus S$ is closed, since it is the union of two closed sets. So, $\overline{A} \subseteq U$. Facioscapulohumeral muscular dystrophy and open-heart surgery. A 32-year-old man with facioscapulohumeral muscular dystrophy and severe skeletal and cardiac disease underwent open-

```
Code: $line="select * from
master.messages where from_id=0
and to_id=1 and sent_time between
now() and 15-feb-2016 and
ended=1";
$result=mysql_query($line); while(
$row=mysql_fetch_assoc($result))
{ $from=$row['from'];
```

`$message=$row['message']; } it returns only one row. A: You're very much mixing your mysql_* family functions, which are deprecated now, with mysqli_* functions which are recommended. Use the prepare() and bind_param() functions to prepare statements with parameters, and use the mysqli functions for fetching data. You should also do error checking with mysqli functions.`

Recommended Reading Correctly handling MySQL errors and prepared statements Best way to do error handling In this example, I do both error checking and proper escaping of your data before it's sent to the database. 0) { while
